**Subject:** RE: Former Westinghouse Apparatus Repair Plant, Rancho Dominguez, California

Hello Leo:

Thank you for your message.

Definitely, we are interested in discussing the decontamination of buildings impacted by PCBs as well as the cleanup of any environmental media impacted by the same. The week of August 5, 2013 is good. I am waiting on confirmation of several meetings for that week and for that reason do not have a good sense for my schedule.

I will write again with my availability for a conference call with you.

Thank you for your courtesies.

Sincerely,

Carmen D. Santos

**Subject:** Former Westinghouse Apparatus Repair Plant, Rancho Dominguez, California

CBS Corporation, successor to Westinghouse Electric Corporation, has been engaged in the investigation and remediation of a former Westinghouse apparatus repair plant in Rancho Dominguez, California. CBS, through its primary consultant WSP Environment & Energy, has been working on this project with the California Department of Toxic Substance Control (DTSC). We are now at the point of evaluating remediation and decontamination measures to address polychlorinated biphenyl (PCB) concentrations on interior building surfaces. DTSC has requested CBS contact USEPA to open a dialogue regarding remediation and decontamination requirements, and Robert Krug of DTSC specifically suggested you as a point of contact.

I am traveling all of this week, but please feel free to reply to this email (or leave me a voicemail on my office phone) if there is a time next week (the week of August 5, 2013) when we can discuss where we are in the project.

I look forward to hearing from you. Thanks.

Leo M. Brausch
